

# INTRODUCTION

Soil Mechanics  
2015 - 2016

## Define: Soil

- ❑ Naturally occurring particulate material
- ❑ Formed, directly or indirectly, from solid rocks (i.e. weathering)
- ❑ Composition of soil particles depends on composition of parent rock
- ❑ The void space between the particles contain water and/or air

# Applications

---

- Engineer uses the SOIL to build:
  - on it: e.g. buildings, bridges
  - in it: e.g. tunnels
  - with it: e.g. earth dams

Dr. Manal A. Salem – Soil Mechanics

# Example: Bridge foundations

---

Dr. Manal A. Salem – Soil Mechanics

## Example: Tunnel

## Course Outline

---

- ❑ Needs to understand the mechanics of this particulate material "SOIL"
  
- ❑ Course Outline:
  1. Phase Diagram
  2. Soil Classification
  3. Soil Compaction
  4. Permeability and Seepage
  5. Stresses
  6. Consolidation
  7. Shear Strength
  8. Slope Stability

Dr. Manal A. Salem – Soil Mechanics

## Intended Learning Outcomes (ILOs)

- By the end of this course, students shall be able to:
  1. Perform fundamental calculations and analysis of soil volume-weight relationships.
  2. Classify soils according to their physical properties.
  3. Understand the process of soil compaction, laboratory and field methods of compaction, and associated evaluation techniques.
  4. Acquire basic principles of 1-D and 2-D flow through soils as well as laboratory and field methods of measuring soil permeability.

Dr. Manal A. Salem – Soil Mechanics

## Intended Learning Outcomes (ILOs)

- By the end of this course, students shall be able to:
  5. Analyze vertical stress distribution in soil and calculate both overburden stresses and stresses induced due to external load.
  6. Understand the theory of 1-D consolidation and calculate consolidation parameters from laboratory tests.
  7. Estimate the magnitude and time rate of soil settlements.
  8. Understand factors contributing to the strength of soils and how soil strength is measured in the laboratory.
  9. Evaluate stability of slopes using different methods of analyses.

Dr. Manal A. Salem – Soil Mechanics

## Instructors and TAs Office Hours

### □ Instructors:

	Sunday	Monday	Tuesday	Wednesday
<b>Prof. Mohamed Elkholy</b>	12 - 2 pm		12 - 2 pm	
<b>Dr. Omar Ezzeldine</b>		12 - 2 pm		2 - 4 pm
<b>Dr. Rami El-Sherbiny</b>		12 - 2 pm		2 - 4 pm
<b>Dr. Manal Salem</b>		12-1 pm		10 am – 12 pm

### □ Teaching Assistants:

	Sunday	Monday	Tuesday	Wednesday
<b>Eng. Mohamed Kamal</b>			12 – 2 pm	12 – 2 pm
<b>Eng. Ahmed Abdelaziz</b>	8 – 10 am			10 am – 12 pm
<b>Eng. Safwat Elrouby</b>		10 am – 12 pm	10 am – 12 pm	
<b>Eng. Moadaz Solaiman</b>	12 – 2 pm		2 – 4 pm	

Dr. Manal A. Salem – Soil Mechanics

## Grades Distribution

### □ Final grade will be calculated as follows:

- Attendance, Participation, HW, and Quizzes 20%
- Midterm Exam 20%
- Final Exam 60%

Dr. Manal A. Salem – Soil Mechanics

# 1. PHASE DIAGRAM

Soil Mechanics  
2015 - 2016

## Phase Diagram

Soil sample  
S: Solids  
W: Water  
A: Air } Voids

Phase  
diagram

## Weight – Volume Relationships

Dr. Manal A. Salem – Soil Mechanics

## Weight – Volume Relationships

- $V_s$  = Volume of solids
- $V_v$  = volume of voids
- $V_w$  = volume of water
- $V_a$  = volume of air
- $V_T$  = total volume  
 $= V_s + V_w + V_a = V_s + V_v$
- $W_s$  = weight of solids
- $W_w$  = weight of water
- $W_T$  = total weight =  $W_s + W_w$

Dr. Manal A. Salem – Soil Mechanics

# Weight – Volume Relationships

## ○ Ratios:

$$w = \text{water content} = \frac{W_w}{W_s} \quad 0 \leq w$$

$$S = \text{degree of saturation} = \frac{V_w}{V_v} \quad 0 \leq S \leq 1$$

$$e = \text{void ratio} = \frac{V_v}{V_s} \quad 0 < e$$

$$n = \text{porosity} = \frac{V_v}{V_T} \quad 0 < n < 1$$

Dr. Manal A. Salem – Soil Mechanics

# Weight – Volume Relationships

## ○ Densities: Weight/Volume

$$\gamma_d = \text{dry unit weight} = \frac{W_s}{V_T}$$

$$\gamma_{\text{wet}} = \text{wet (bulk) unit weight} = \frac{W_T}{V_T} = \frac{W_s + W_w}{V_T}$$

$$\gamma_{\text{sat}} = \text{saturated unit weight} = \frac{W_s + \gamma_w V_v}{V_T}$$

$$\begin{aligned} \gamma_{\text{sub}} &= \text{submerged unit weight} \\ &= \frac{W_s + \gamma_w V_v - \gamma_w V_T}{V_T} \\ &= \gamma_{\text{sat}} - \gamma_w \end{aligned}$$

Dr. Manal A. Salem – Soil Mechanics

## Weight – Volume Relationships

$\gamma_w = \text{density of water} = W_w/V_w = 1.0 \text{ t/m}^3 = 1.0 \text{ gm/cm}^3 \simeq 10 \text{ kN/m}^3$

$\gamma_s = \text{density of solids} = W_s/V_s = 2.5 - 2.8 \text{ t/m}^3$

$G_s = \text{specific gravity of solids} = \gamma_s/\gamma_w$  (dimensionless)

Dr. Manal A. Salem – Soil Mechanics

## Laboratory Measurements

### How to measure soil water content?

1. Get the total weight of soil sample =  $W_T$
2. Oven-dry the sample, then weigh =  $W_s$
3. Calculate:  $w = \frac{W_w}{W_s} = \frac{W_T - W_s}{W_s}$

### How to measure total volume of soil sample ( $V_T$ )? By either:

1. Submerging the sample in container full of mercury. Measure weight of displaced mercury ( $W_{\text{mercury}}$ ).  
 $V_T = W_{\text{mercury}}/\gamma_{\text{mercury}}$
2. Cover the sample with wax, then submerge it in container full of water. Measure weight of displaced water ( $W_w$ ).  
 $V_T + V_{\text{wax}} = W_w/\gamma_w$ . Then peel the wax, and get  $W_{\text{wax}}$ , and calculate  $V_{\text{wax}} = W_{\text{wax}}/\gamma_{\text{wax}}$ . Thus get  $V_T$ .

Dr. Manal A. Salem – Soil Mechanics

## Solving Phase Diagrams

### 1. Given: $w$ , $G_s$ , and $S$

Assume  $W_s = 1$

$$w = \frac{W_w}{W_s} = \frac{W_w}{1}$$

$$\gamma_s = \frac{W_s}{V_s} \quad V_s = \frac{W_s}{\gamma_s}$$

$$G_s = \frac{\gamma_s}{\gamma_w} \quad \gamma_s = G_s \gamma_w$$

$$V_s = \frac{W_s}{G_s \gamma_w} = \frac{1}{G_s \gamma_w}$$

$$\gamma_w = \frac{W_w}{V_w} \quad V_w = \frac{W_w}{\gamma_w} = \frac{w}{\gamma_w}$$

$$S = \frac{V_w}{V_v} \quad V_v = \frac{V_w}{S} = \frac{w}{S \gamma_w}$$

→ Can get  $e$ ,  $n$ ,  $\gamma_d$

Dr. Manal A. Salem – Soil Mechanics

## Solving Phase Diagrams

### 2. Given: $e$ , $G_s$ , and $S$ . Required: $w$ , $n$ , $\gamma_d$ ?

Assume  $V_s = 1$

$$e = \frac{V_v}{V_s} = \frac{V_v}{1}$$

$$S = \frac{V_w}{V_v} \quad V_w = V_v S = eS$$

$$W_w = \gamma_w V_w = \gamma_w eS$$

$$W_s = \gamma_s V_s = \gamma_w G_s$$

→ Can get  $w$ ,  $n$ ,  $\gamma_d$
